Quiz 5

Student: SID:

Tue 2/26/19

True/False - No explanation needed. (1pt for correct, 0pt - no answer, -1pt - incorrect)

1. The probability of the event A and the event B occurring is lower bounded by the minimum of the probability of the event A and the probability of the event B, i.e.

$$P(A \cap B) \ge \min(P(A), P(B))$$

- . True/False
- 2. The probability of the event A occurring is always less than or equal to the probability of the event A occurring given that the event B occurs, i.e. $P(A) \leq P(A|B)$. True/False

Problems - Need justification. No justification means zero!

- 1. (10pts) A family has 5 kids in a row. The probability of having a boy is 0.6. Calculate:
 - (a) The probability of 3 girls and 2 boys.
 - (b) The probability of 2 girls given at least 1 boy.

Hint: You do not need to simplify your answers.
